## RAW MATERIAL/TRANSPORT AND WAREHOUSING

### • Bucket and lids are made of polypropylene (PP)

• **Warehousing:** In the case of stacking pallets with filled containers put weight uniformly, using for example proper separators

• **Filling: and closing conditions:** max content temperature during filling 95° C, during stacking content temperature should be lower than 45°C. Put not more than 2 warm containers in the stack.

When temperature decrease to 25-30° containers are characterized by optimal rigidity and mechanical parameters allowing stacking for maximal static load as below.

### • load on the lower container:

Static (T<23c°). <40 kg

Transparent container < 32 kg

• **Transportation of filled containers:** containers may be stacked to the 66 % of maximal static load.

• **Palletizing of containers:** product with density 1,6g/cm<sup>3</sup> according to the customer practice giving consideration to the mentioned earlier values.

• **All materials and dyes used:** to the produce container or lid designed for the food sector are proved for food contact

• **This guarantee** is valid 12 months from date of delivery. During this time, the package should be used. All packages from single pallet should be used immediately after unpacking.

• **Manufacturer** is not responsible for container deformation because stacking of single pallets or putting on them an extra load.
