RAW MATERIAL/TRANSPORT AND WAREHOUSING

● **Bucket and lids are made of polypropylene (PP)**

● **Warehousing:** In the case of stacking pallets with filled containers put weight uniformly, using for example proper separators

● **Filling: and closing conditions:** max content temperature during filling 95° C, during stacking content temperature should be lower than 45°C. Put not more than 2 warm containers in the stack.

When temperature decrease to 25-30° containers are characterized by optimal rigidity and mechanical parameters allowing stacking for maximal static load as below.

● **load on the lower container:**

Static (T<23c°). <45kg

Trasparent container< 36kg

● **Trasportation of filled containers:** containers may be stacked to the 66 % of maximal static load.

● **Palletizing of containers:** product with density 1,6g/cm3 according to the customer practice giving consideration to the mentioned earlier values.

● **All materials and dyes used:** to the produce container or lid designed for the food sector are pproved for food contact

● **This guarantee** is valod 12 months from date of delivery. During this time, the, the package shoulbe used. All packages from singles pallet should be used immediately after un paking.

● **Manufacturer** is not responsible for conatiner deformatrimon because stacking of singles pallets or nputting on them an extra load.
